

LIMS ACCELERATOR™

ELIMINATE MANUAL PROCESSES AND INCREASE LAB EFFICIENCIES THROUGH PROCESS AUTOMATION

Pharmaceutical and biotech laboratories are tasked with managing increasing volumes of data under growing regulatory compliance. Confounding this dilemma is the need to eliminate manual, repetitive tasks and deliver high quality products that are right the first time.

To manage this data, many companies invest in LIMS, believing that their labs will run more efficiently. But in reality, the high level of system configuration LIMS requires, brings unexpected costs to IT and quality organizations. After years of working with pharmaceutical labs, Rural Sourcing Inc. (RSI) created LIMS Accelerator™, the missing element that maximizes the full potential of LIMS.

LIMS Accelerator is a powerful process automation solution that bridges this data management gap and helps clients achieve the full efficiencies of LIMS. It simply sits on top of existing LIMS to automate configuration and helps labs manage complex testing and workflows, track and analyze samples from reception to reporting, and enables automated processes faster and with more accuracy.

LIMS ACCELERATOR DOES THE HEAVY LIFTING

LIMS Accelerator is a proprietary tool that is configured for each client and project. It works with any platform, is easy to implement and features the following benefits:

Automates Configuration: The LIMS Accelerator automates configuration, requires less effort, delivers information quickly and eliminates the labor intensive process of manual system configuration, increasing efficiencies by up to 80%.

Reduces Costs: Lowers the cost of professional services related to your LIMS implementation. With efficiency gains from LIMS Accelerator, labs reduce the need for professional services and drive down the total cost of ownership.

Improves Accuracy: Makes decisions based upon policies set in place, delivers higher quality outcomes and helps eliminate human error.

Standardizes Workflows: Automates master data tracking for more agile and standardized processes.

Intuitive Dashboard: Facilitates the decision-making process with a built-in wizard that intuitively prompts the user with questions and uses responses to make decisions that deliver the best outcome.

Harmonization between Labs: Delivers configurable software based upon organization or company-wide standards and increases the ability for labs to collaborate.

Increases Insight: Provides valuable insight into existing data across your entire network and allows for a benchmark-based comparison between labs and facilities due to the harmonized nature of the LIMS data.

LIMS Accelerator is supported by a highly-skilled RSI team with context-specific knowledge of industry, regulatory and laboratory processes, as well as deep experience in LIMS reporting across many specific domains including lot management, results reporting, stability and regulatory reporting.
